Re: Gas Main / Service Line Construction

Dear CenterPoint Energy Customer,

CenterPoint Energy has a longstanding commitment to serve the communities in which we live and work. We recognize that our customers are being impacted by the Coronavirus situation and we remain committed to providing you with reliable natural gas service. In order to continue to do so, there are certain instances where essential work must be performed.

CenterPoint Energy's natural gas operations is planning a system modernization that will replace natural gas mains and services in your neighborhood in the near future. The purpose of the project is to ensure the integrity of our facilities so that they can continue to operate safely and reliably. While we conduct this work, we will strive to minimize the impact to our customers.

This construction may require installing new main in the street right-of-way or in utility easements. New service lines may be installed from the street right-of-way or from the utility easement to your existing meter location. Construction methods will be used to minimize disturbance to your property and every effort will be made to restore the work area back to original condition. Prior to construction, a door hanger notification will be placed on your front door letting you know that we will start construction within several weeks.

This construction may also require temporary interruption to your service in the process of switching over to the new facilities. If your service is interrupted, our service technician will perform a safety check on all natural gas appliances and equipment and relight pilots as needed. CenterPoint Energy or our contractor service technicians will have a marked vehicle and be able to provide a picture ID. This will be coordinated with you prior to it being performed in an effort to minimize the time that your service is interrupted.

In response to the Coronavirus situation, CenterPoint Energy has implemented additional measures to protect your safety and health and our employees and contractors, as well as to prevent the spread of the virus. These safety measures include:

- Equipping employees with additional personal protective equipment (PPE);
- Directing service technicians to attempt to resolve service issues without entering homes or businesses;
- Following social distancing guidelines and wearing PPE if entering customers' homes, businesses and property to provide service;
- Increasing cleaning and disinfecting frequency of facilities and vehicles; and
- Emphasizing good hygiene, including washing and sanitizing hands.

Please let the service technician know if you are not comfortable with employees entering your property. CenterPoint Energy has instructed all contractors, construction workers and field service representatives to work with each customer during the Coronavirus situation. If there isn't an emergency, service technicians can suspend the work if the customer is not comfortable with an employee accessing his or her property.

During these uncertain times, CenterPoint Energy is focused on providing reliable natural gas service to all. We appreciate your assistance and patience with us on this construction and we apologize in advance for any inconvenience that you may experience.

The following contact information is provided if you have any questions or need assistance:

Customer Service – 713-659-2111 – for gas service restoration

Construction inspector – Matthew Grape – (713) 906-1357
